

MANUAL on how to use ELA app:

1. What ELA can teach you?

At Main Menu, it has 4 buttons to access which are:

- **Introduction**

This section introduces users to the:

- History of Arduino
- What is Arduino hardware (Arduino Board)?
- What are the types of Arduino Board?
- Suggested link to buy Arduino hardware.
- What is Arduino software (Arduino IDE)?
- Provide links to download software such as:
 - Arduino IDE (Official),
 - Proteus Professional (Official & Crack),
 - KiCAD (Official),
 - Fritzing (Official & Crack),
 - Virtual Breadboard (Official).
- Give video tutorial on:
 - Installation of Arduino IDE (Official)
 - Installation of Proteus Professional 2020 (Crack)
 - How to set HEX files location
 - How to add Arduino Library into Proteus
 - How to do if no library found in Proteus
 - How to Implement Arduino coding into Proteus

- **Comparison**

This section will give a comparison of the 3 popular Arduino boards (MEGA, UNO, NANO) and provide some information such as:

- Full pinout Diagram of Arduino MEGA, Arduino UNO, and Arduino NANO.
- Data Sheet of Arduino MEGA, Arduino UNO, and Arduino NANO.
- Suggested project links for each Arduino board (MEGA, UNO, NANO).

- **Application**

This section will give examples of electronic projects with the application of Arduino boards (MEGA, UNO, NANO), the electronic projects include:

- Components needed (Hardware needed)
- Software needed (for drawing & simulation of Schematic Diagram, Wiring Diagram)
- The coding of Arduino IDE needed to implement in the Arduino projects.
- Schematic Diagram (drawn in Proteus).
- Wiring Connection diagram (drawn in Fritzing or Virtual Breadboard).
- Video Demonstration (shown on Youtube, on how to build the projects and how the projects are actually workings).
- **Comment button** on the bottom of each example (To allow users to exchange their opinions, asking problems).

- **About the app**

This section will introduce how this app (ELA) can help users on learning Arduino. It includes:

- the details of the developer of this app (ELA)
- Manual on this mobile application (ELA) – [This file].

2. How to use this app?

To access or navigate between this application, follow the instructions!

When you are in “Main Menu” aka “Welcome to ELA”:

- Press button namely “INTRODUCTION”: to access to the introduction section which will provide information as stated at above.
- Press button namely “COMPARISON”: to access to Comparison section to see manual of Arduino boards.
- Press button namely “APPLICATION”: to access to examples of Arduino projects.
- Press “About the App”: to access to this mobile app user manual.

When you are in “Introduction”:

- Press each image: to zoom in the image you desired to preview.
- Press the hypertext: to direct to the website you desired to parse into.
 - Examples of Hyperlink: [\[Shopee\]](#)
- Press Button: to direct to the download link to download the items you intend to download.
- Press Button with Youtube sign: to direct to the video you intend to watch.

When you are in “Comparison”, you can:

- Press Full Pinout Diagram (Image): to get directed to its pdf file on google drive (required google email login in smartphone).
- Press Button with pdf sign: to get directed to the pdf file on google drive on the manual of the main 3 popular Arduino boards (MEGA, UNO, NANO).
- Press the hypertext: to get directed into the suggested Arduino projects of each 3 Arduino boards (MEGA, UNO, NANO).

When you are in “Application”, you can:

- Press the image: to zoom in on the image you desired to preview.
- Hold and select the coding: to copy it.
- Press the comment button: to allow you to comment your opinion, ask questions.

When you are in “About the App”, you can:

- Press the button: to get directed to this pdf [MANUAL].
